

JARVIS DAILY, PUNE

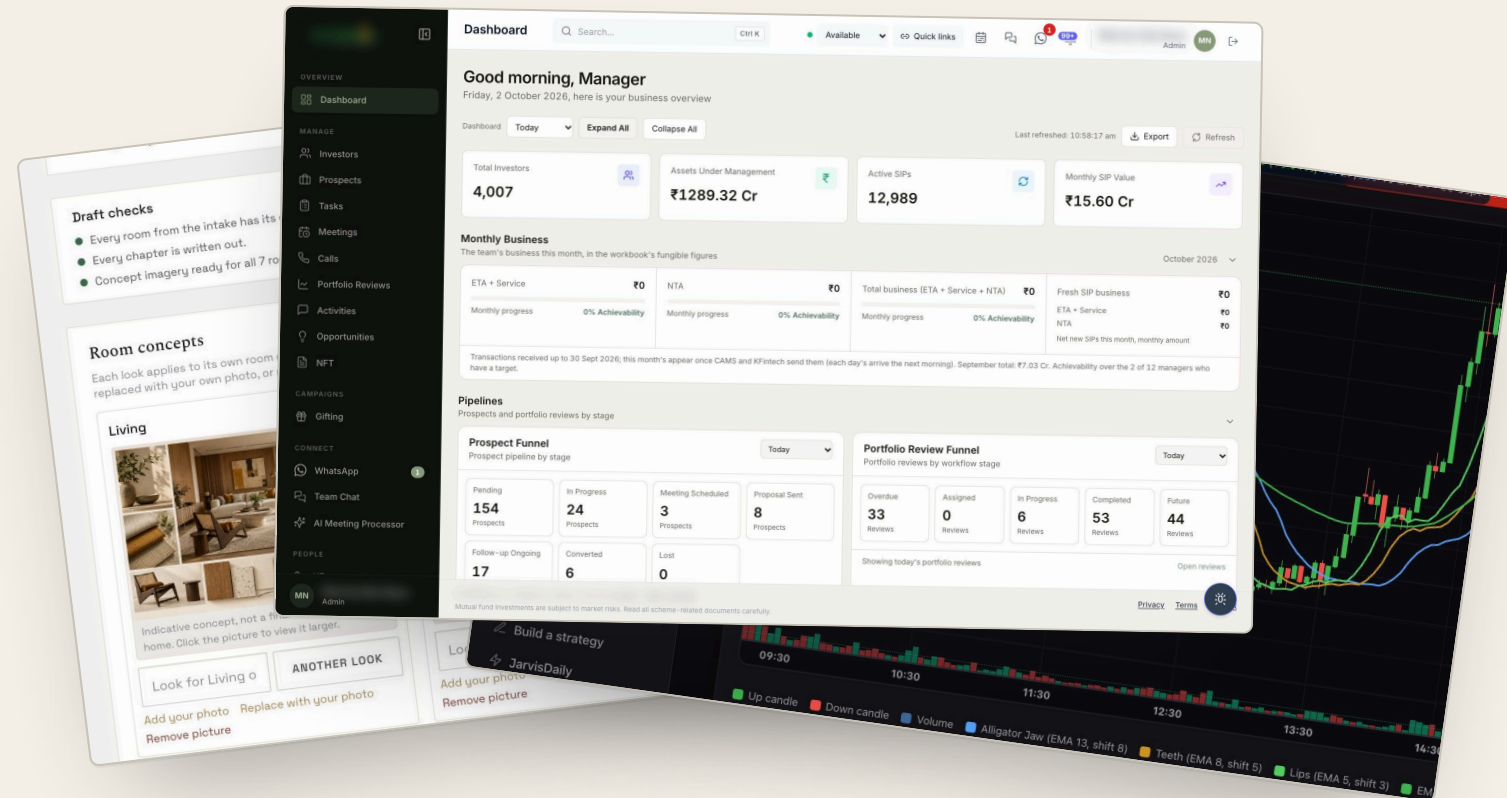

Your AI department, *run by us.*

An AI automation agency and software company. We audit a business, build the software and the AI employees it needs, and run them every day.

MEET THE OWNER

Forty people. A hundred open threads. One head holding it all.

Running a growing business in India today sounds like this, every single week.

“The social post did not go out again.” “That proposal should have gone last week.”

“Nobody remembers what we told the client in March.” “Which AI tool is right for us? No idea.”

“Leads come in at eleven at night and wait till morning.”

“Follow-ups fall through the cracks.” “The website looks fine. It brings no business.”

“Nobody answers the phone after six.”

“I want more leads, more meetings, more conversions.”

“I am the only one who knows how everything works.” “Operations run on WhatsApp and memory.”

“I cannot take a holiday without the business stopping.”

“How do I grow without hiring five more people?”

“Invoices go out late. Money comes in later.” “I want employees who work twenty-four seven.”

“Costs keep climbing. Margins do not.” “I want to be found when people ask ChatGPT, not only Google.”

“I want to see every part of the business in one place.” “I want a tool built for us, not another subscription.”

“I want to be one step ahead, not catching up.”

“I want to use AI to speed everything up. Where do I start?”

“I want my company to be intelligent, not just busy.”

The worry is measured. *It costs money every week.*

7_x

more likely to qualify a lead when a business replies within an hour. Most take a day. One in four never reply.

HARVARD BUSINESS REVIEW, 2,241 COMPANIES

62%

of calls to small businesses never reach a person. Most callers who hit voicemail hang up and call a competitor.

411 LOCALS; INVOCA

47%

of calls to businesses arrive after hours or on weekends, when nobody is there to take them.

ANSWERCONNECT, 2026

1/3

of an owner's working week goes to admin, invoices and chasing, not to selling or building.

XERO; STARTUPS MAGAZINE

45%

of consumers now ask an AI for a business recommendation, up from 6 percent a year earlier. Two thirds of businesses appear in none of the answers.

BRIGHTLOCAL 2026; ASKEDABOUT

1 in 4

Indian MSMEs has put AI to work. Most of the rest say they do not know which tools fit them or where to begin.

VI BUSINESS MSME STUDY, 2026

This is where *we come in.*

1

Custom software

The CRM, the dashboard, the engine a business actually needs. Built around how they already work, not a template they must bend to.

2

AI employees

Agents that do the repeated work twenty-four seven: replies, calls, research, drafts, follow-ups, reports. People keep the judgment.

3

Forward-deployed engineers

We sit inside the business, learn how it runs, build next to the team, and keep running what we built.

What exactly *we do.*

Sales

- Leads captured on web and WhatsApp, day and night
- An AI call-back within a minute, in English, Hindi or Marathi
- Follow-ups that never slip
- Proposals drafted in minutes
- Meetings booked while you sleep

Marketing

- Social posts researched, drafted and sent on schedule
- Content written for Google and for AI engines (SEO, AEO, GEO)
- Websites that bring business, built in days
- Reviews asked for and answered
- Monthly numbers, explained

Operations

- A CRM built around your process
- Invoices, reminders and collections on time
- A dashboard of the whole business
- A second brain that remembers every client
- A chief of staff that runs the day

Technology

- Custom software and engines
- Voice agents that call and answer
- WhatsApp assistants for customers and staff
- Trading and planning engines from your own rules
- An Agent OS for the whole company

It always starts *with an AI audit.*

We do not start by selling a tool. We start by understanding where your hours and your leads go.

1

AI audit

Who does what, which tools, where the hours go. Part of it is done by our own AI interviewer.

2

Findings

A short map of where AI fits: sales, marketing, operations, finance. Three to five quick wins.

3

Proposal

What we will build, in plain words, with a working demo where we can.

4

Walkthrough

We go through it together. You say yes, no, or change this.

5

Build

Weeks, not months. A dashboard shows what was built and how it works.

6

Run and improve

Your AI employees work every day. We keep tuning them with your team.

SALES

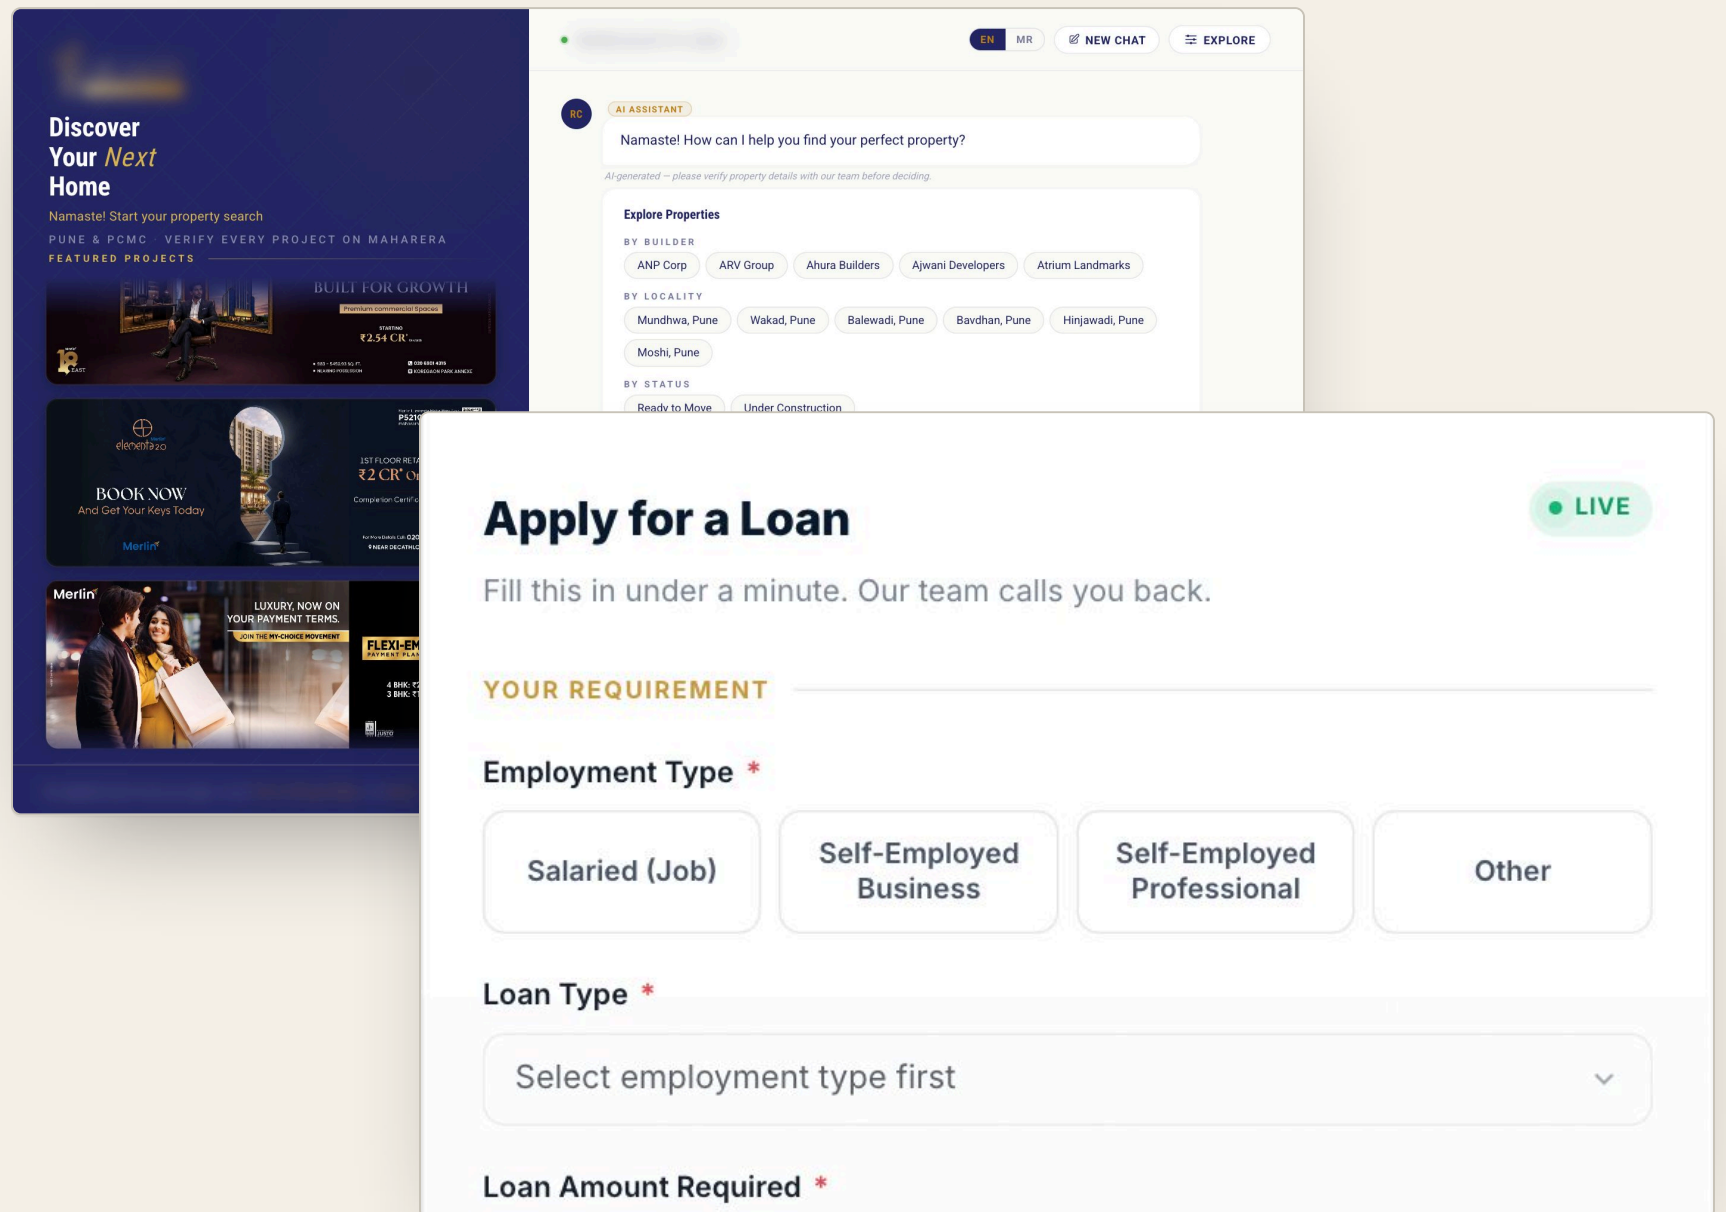

Nothing waits
for morning.

Every enquiry answered, day and night
web chat and WhatsApp, in the buyer's language

A call-back within a minute

an AI voice agent qualifies the lead and books the visit

Proposals in minutes, follow-ups on time
meetings land on your calendar while you sleep

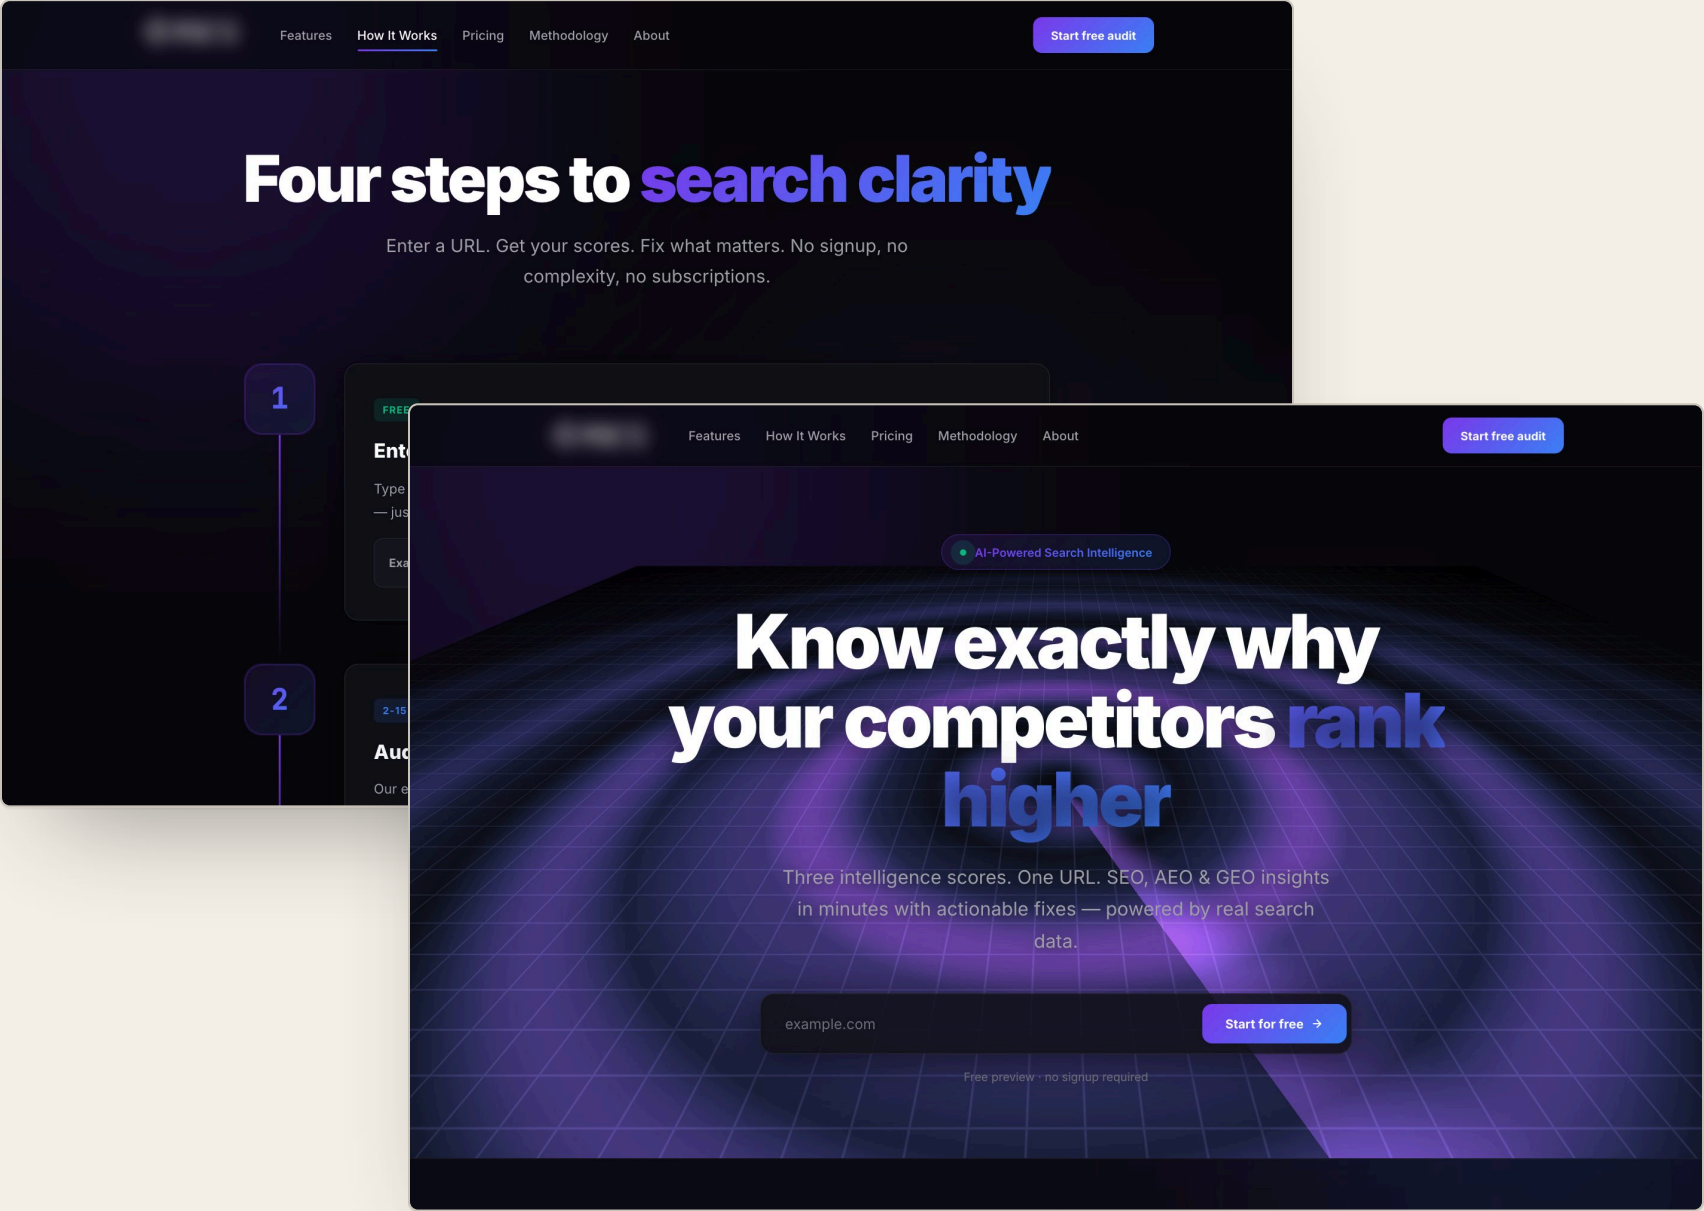

MARKETING

Found by Google, and by the AI engines.

Posts that actually go out
researched, drafted, approved, scheduled

Written for search and for AI answers
SEO, AEO and GEO scored and fixed

A website that brings business
built in days, with a working assistant on it

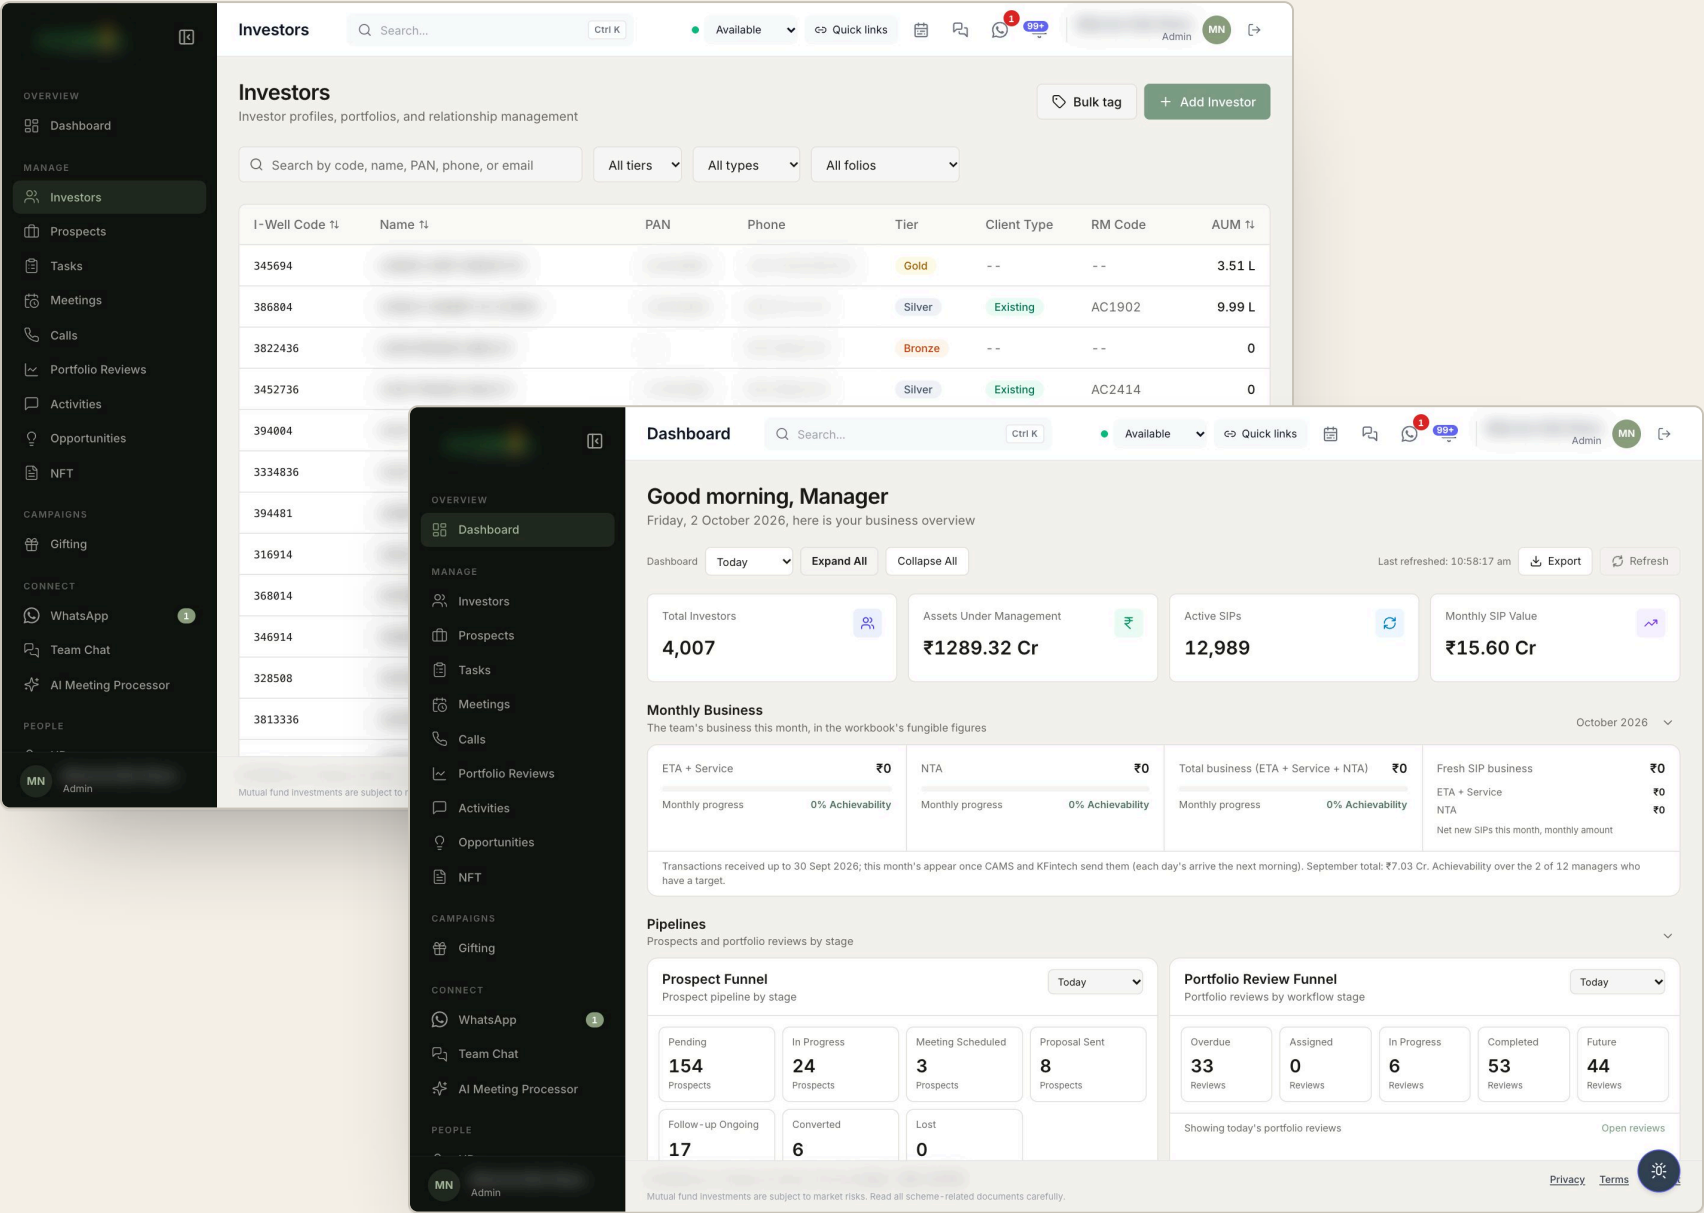

OPERATIONS

The whole business in one place.

A CRM built around your process
clients, prospects, tasks, reviews, meetings

Reminders raised by the system, not by memory
follow-up calls auto-raised with a 91 percent completion rate

The morning dashboard
assets, pipeline, what is overdue, who is on it

A chief of staff, a teammate per department, one shared memory.

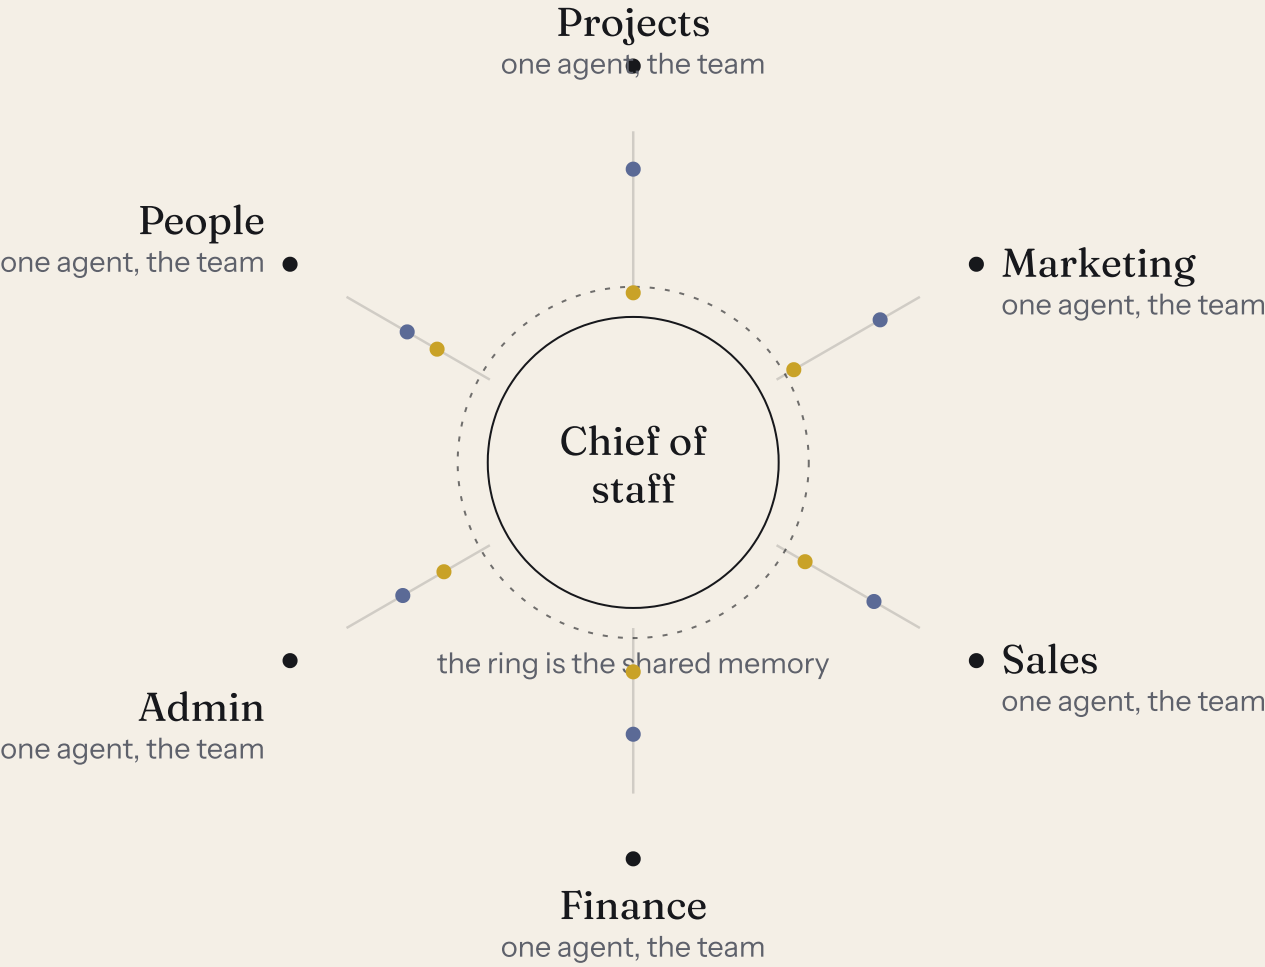

The chief of staff runs the day reads the memory, assigns work, chases what is late

AI does the legwork research, drafts, first versions, follow-ups

People give judgment taste and approval at fixed gates

Every correction teaches the agent learns that person's taste

Just talk to it on WhatsApp, or by voice

Gold: agents writing what they did. Blue: people deciding at the gates.

A WORKING MORNING

Your team, before you have had your tea.

The chief of staff opens the thread from a deadline it found in the memory

Each department answers with what it has case studies, a draft, the client's payment history

A person gives the yes taste and approval, then it goes out

- CHIEF OF STAFF

The pitch for the Kolhapur hotel is due Friday. What do we have?

09:02
- MARKETING AGENT

Three matching case studies in memory, all hospitality. Pulling them with the before and after photos.

09:02
- SALES AGENT

First draft of the proposal in fourteen minutes. Scope from the brief, rates from the rate library, their last two meetings as context.

09:03
- FINANCE AGENT

Their last three invoices cleared on time. No credit flag. Suggested payment terms attached.

09:03
- CHIEF OF STAFF

Draft goes to the design lead at four for taste and approval. Nothing leaves without a human yes.

09:04
- DESIGN LEAD

Shorten the fee section and lead with the resort project. Approved.

16:10

THE SECOND BRAIN

Your company stops depending on one person's memory.

Built in layers from your own data

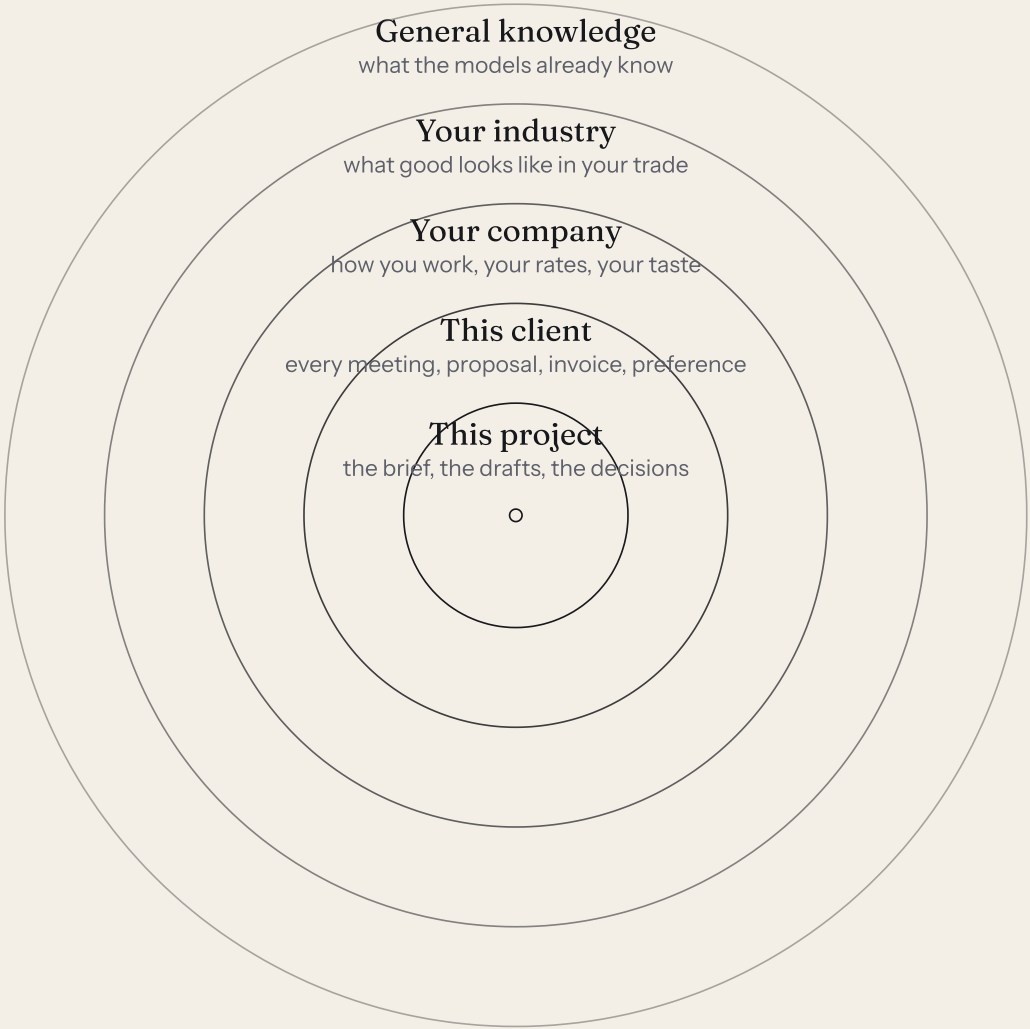

general knowledge, your industry, your company, each client, each project

Every agent reads it before acting and writes to it after

a booked meeting, a sent proposal, a paid invoice, a lesson learned

Searchable by anyone on the team

what did we tell this client in March? It is there.

CASE STUDY: A COMMODITY TRADING DESK

Their rules, executed by software, on every account at once.

66

strategies written as configuration, across index, silver, gold and gas

11

client accounts on one operator board

883

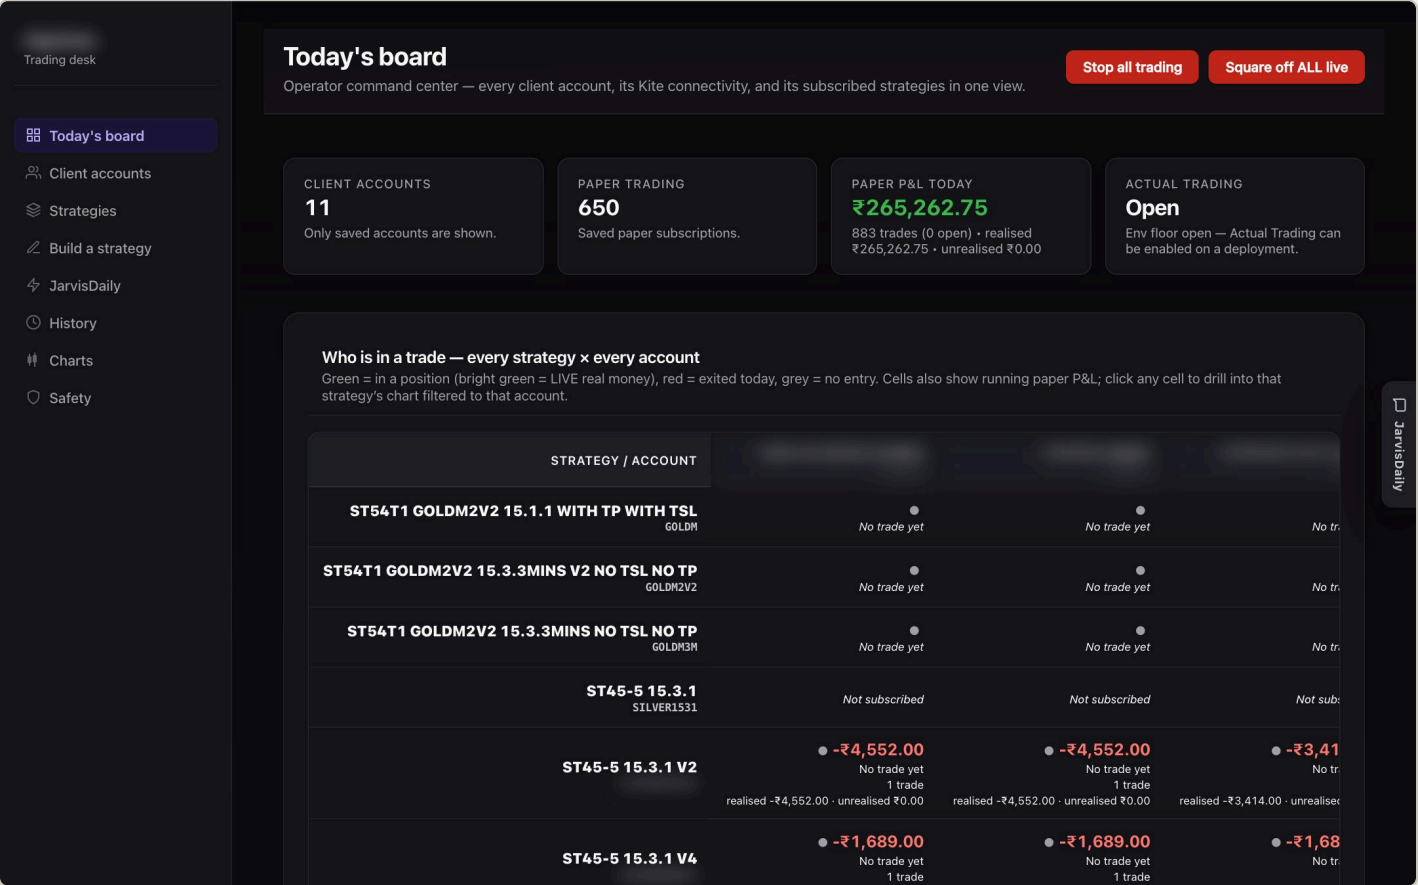

trades evaluated in a single paper session before a rupee went live

1

kill switch that squares off everything in one click

"Every rule we used to watch by hand now runs on its own, and I can stop all of it in one click."

OWNER'S WORDS

CASE STUDY: A MUTUAL FUND DISTRIBUTION FIRM

Nineteen modules,
one login, the
whole book in view.

4,007
investors managed
in the CRM

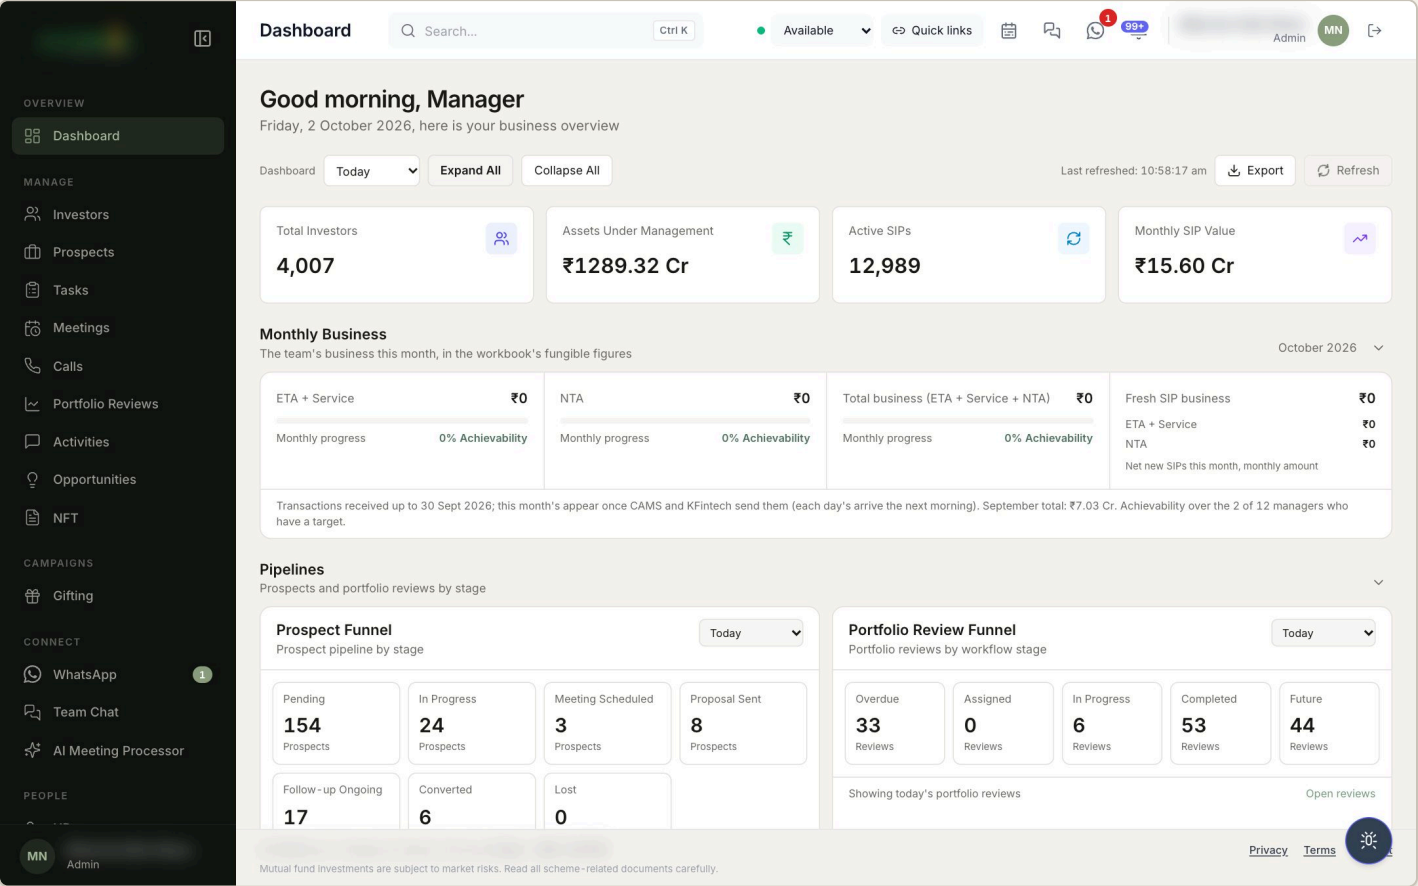

Rs
1,289
Cr
of assets under
management, live
on the dashboard

12,989
active SIPs, Rs 15.6
crore a month

91%
completion on
follow-up calls the
system raises by
itself

"Half the team's week moved from spreadsheets to client
conversations."

OWNER'S ESTIMATE

CASE STUDY: AN ARCHITECTURE PRACTICE

Proposals that took days now go out the same day.

46

proposals drafted
on the engine in its
first months

13

sections and 7
rooms of concept
images in one
draft, in minutes

9

versions of one
proposal kept,
every edit
traceable

1

chat box to edit it,
in English or
Marathi

"We send more proposals, faster, and clients see their rooms
before they sign."

OWNER'S WORDS

Draft checks

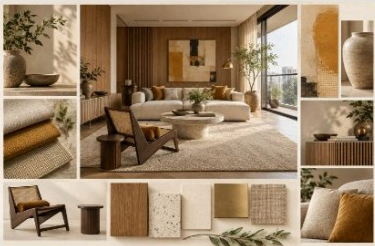

- Every room from the intake has its chapter (7).
- Every chapter is written out.
- Concept imagery ready for all 7 rooms.
- No rooms beyond the intake scope.
- Costing is in place.

Room concepts

Concept imagery for every room, ready before you send.

Each look applies to its own room only. Approved pictures appear on the proposal; pending ones wait for sign-off. An approved picture can still be regenerated, replaced with your own photo, or removed at any time.

Living

Indicative concept, not a final view of your home. Click the picture to view it larger.

CASE STUDIES: A PLANNING FIRM, A SEARCH PRODUCT

An Excel workbook became an engine. An audit became a product.

8 of 8

of the firm's formulas reproduced, within 0.05 percent

Minutes

for a full plan, charts and a pack the client opens on their phone

127

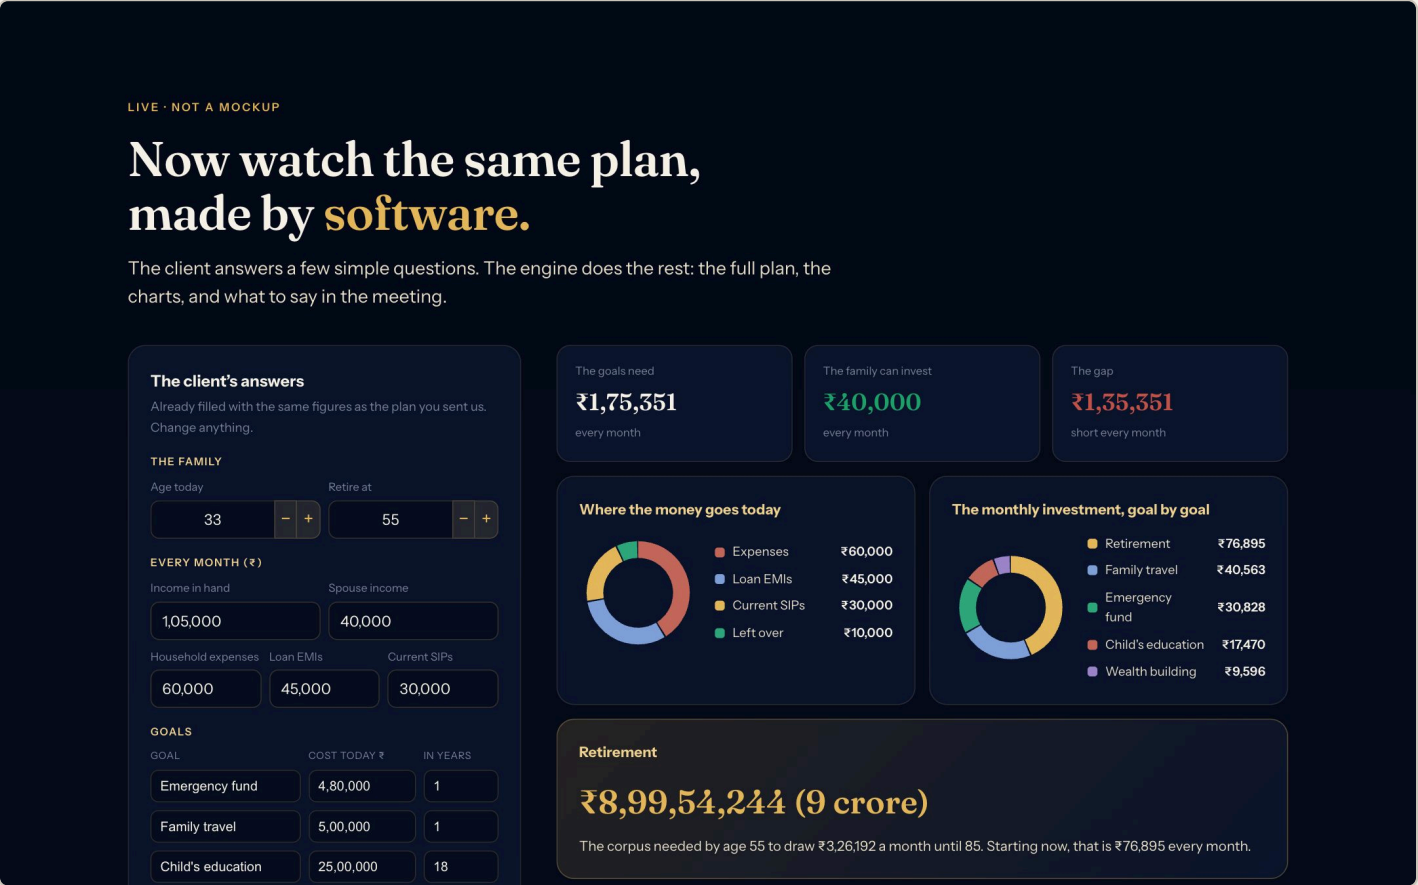

automated checks in one website audit

2 to 15

minutes from URL to a scored report, paid online

"A plan that took an afternoon now takes the length of the meeting."

OWNER'S WORDS

What it costs, *and* *what it replaces.*

With Jarvis Daily

Rs 15,000 to 40,000 *a month*

The retainer for an AI department that works twenty-four seven, after a one-time build that ranges from a few weeks to a few months of work depending on scope.

Never on leave, never off the phone, never forgets a follow-up

Grows with the business without a new hire for every new task

Third-party AI and hosting on your own accounts, at cost, no markup

If it saves one person's week or wins one extra client a month, it has paid for itself.

The alternative

One more hire *per task*

A junior employee for the same money, for eight hours a day, plus training, management and the knowledge that leaves when they do.

Leads still wait overnight and over weekends

The process still lives in one person's head

Every new task means another person to find, train and keep

WHY JARVIS DAILY

We run our own company on the same system.

Founder-led engineering

the people who design your system are the people who build it

Nine businesses in six months

trading, wealth, architecture, real estate, food, lending, a designers' body

A human approves anything that goes out

drafts, calls, posts and payments all pass a person first

Start with *an AI audit*.

A twenty-minute conversation, then our audit of how your business runs today.

1

A map of where the hours go

Who does what, which tools you pay for, where leads and follow-ups are lost.

2

Three to five quick wins

The first things an AI employee should take off your team's plate, in order.

3

A proposal with a working demo

What we would build and run, in plain words, with something you can click.

Your business, *running while you sleep.*

Jarvis Daily. Your AI department, run by us.

SOURCES

Where the numbers come from.

Lead response. Oldroyd, McElheran, Elkington, "The Short Life of Online Sales Leads", Harvard Business Review, March 2011: an audit of 2,241 US companies; replying within an hour made firms nearly seven times more likely to qualify the lead; 23 percent never replied.

Five-minute rule. Oldroyd, MIT Sloan and InsideSales Lead Response Management study, 2007: qualification odds fall 21 times between a 5-minute and a 30-minute response.

Unanswered calls. 411 Locals call study: 37.8 percent of calls to small businesses answered live, 62 percent unanswered; Invoca and industry data: 80 to 85 percent of callers who reach voicemail hang up.

After hours. AnswerConnect call data, September 2026: 47 percent of calls to businesses occur outside Monday to Friday working hours.

Admin time. Xero, "The hidden time tax", and Startups Magazine survey: owners spend roughly a third of the week on admin and nearly twice as long on admin as on growing the business.

AI recommendations. BrightLocal Local Consumer Review Survey 2026: 45 percent of consumers have asked an AI tool for a business recommendation, up from 6 percent; AskedAbout audit, August 2026: 67 percent of audited businesses appeared in none of the AI answers. Yext 2026: 28 percent tried a new business because of an AI recommendation.

India MSMEs. Vi Business MSME Growth Insights Study 2026: one in four MSMEs has integrated AI tools; 57 percent see AI as a vital growth driver.

Case-study figures are read from the live products as of October 2026. Lines marked "owner's words" or "owner's estimate" are the clients' own statements, not measured by us.
